

## ICANN Reveals New Applied-For gTLDs

06.13.2012

On Wednesday, June 13, ICANN revealed its list of 280 new generic Top Level Domain (gTLD) applied-for strings. The full list can be found [here](#).

As discussed in previous posts, trademark owners are encouraged to review the list of new gTLDs, both to identify whether to object to any gTLD applications and to begin to identify those gTLDs in connection with which the trademark owners will seek to register domains incorporating their trademarks.
