

Solid Waste Management and Resource Recovery

Williams Mullen represents municipalities, public authorities and private entities nationwide on all aspects of solid waste management and disposal, including the planning, development and implementation of:

- Resource Recovery (Waste-to-Energy) Facilities
- Materials Recovery/Recycling Facilities
- Waste Collection and Disposal
- Power and Renewable Energy Credit (REC) Purchases and Sales
- Transfer Stations
- Landfill Development, Expansion and Closure
- Landfill Gas Recovery, Reuse and Energy Generation

The complexity of municipal and industrial solid waste transactions and the time and financial commitments required to complete them underscore the need for experienced legal counsel. Solid waste projects involve a wide range of legal, environmental, regulatory and financial issues that require sophisticated counsel with broad project management, knowledge, negotiation skills and implementation experience.

Williams Mullen attorneys have the long-standing experience and skills necessary to successfully complete sound, environmentally efficient and economically fair solid waste projects. Our attorneys are fully prepared and knowledgeable in all relevant fields of law and provide our clients with comprehensive legal representation. We stay abreast of evolving waste disposal technologies, industry trends and contract terms, and have a proven record of assisting clients in taking projects from conceptualization to closing and beyond.
